

Boat Rescue Net X-544

Boat Rescue Net: Safeguarding Lives at Sea

While retrieving a person overboard is a scenario we all hope to avoid, having the right equipment is paramount in potentially life-saving situations.

The X-544 offers a streamlined solution to the challenges of retrieving individuals from the water. With its innovative design, this system simplifies the process, eliminating the need for strenuous pulling or precarious attempts to climb back onto the vessel from the water's surface. By utilizing the ship's onboard davit in conjunction with the X-544, lifting individuals, even multiple at once, becomes significantly easier.

In the event of a man overboard emergency, the X-544 provides a secure means for the victim to either swim inside the netted area or receive assistance to safely enter it. Once secured, the system facilitates their swift and secure return to the vessel via davit lifting, ensuring their prompt rescue and safety.

MODEL	PACKING DIMENSIONS	DEPLOYED DIMENSIONS	WEIGHT	CAPACITY
-------	--------------------	---------------------	--------	----------

X-544	78" x 50" x 12"	74" x 45" x 56"	73 lbs	Rated for 2 Persons
