

Straatman Quick Release Towing Hooks

A Premier Solution For Maritime Towing Operations

Crafted with precision engineering and utmost safety in mind, this towing hook is meticulously designed to ensure seamless and secure operations across a spectrum of vessels, from work boats to firefighting ships.

The GSH towing hook offers flexibility in operation, with both manual and remote release options available. Its intuitive design allows for effortless manual operation, requiring minimal exertion even at full capacity. Featuring a robust two-step release mechanism, accidental openings are effectively prevented, guaranteeing peace of mind during towing maneuvers.

Designed for adaptability, the GSH towing hook is available in a range of Safe Working Load (SWL) capacities, spanning from 15 to 100 tonnes. Whether you're navigating harbors, coastal waters, or tackling demanding towing tasks, there's a GSH hook to suit your requirements.

For enhanced performance and customization, optional features include a spring-loaded shock absorber, bespoke designs tailored to your specifications, and the choice of local hydraulic or pneumatic release mechanisms. With additional options such as remote-controlled release, load monitoring systems, and versatile hook foundation configurations, you have the flexibility to optimize your towing setup for maximum efficiency and safety.

Options:

- Spring loaded shock absorber
- Customized designs
- Local hydraulic or Pneumatic release
- Remote controlled release
- Load monitoring system
- Hook foundation / bracket / towing post

Experience the pinnacle of towing technology with the Straatman Type GSH Quick Release Towing Hook – the epitome of reliability, versatility, and safety in maritime operations.
