

Seawork Immersion Anti-Exposure Suit

Prepare for the most challenging maritime conditions with the Seawork Immersion Anti-Exposure Suit - a next-generation marvel engineered for durability and flexibility. Seawork is the result of close collaboration with users and is specifically designed for maintenance work in exposed areas aboard ships and offshore installations.

Key Features:

- **Durable and Flexible:** Seawork is built to endure the harshest conditions while providing the flexibility needed for active work. Its ergonomic, modern construction ensures a comfortable fit, making it a practical choice for those who work on the high seas.
- **Clean and Low Maintenance:** The highly dirt-repellent outer fabric simplifies cleaning and maintenance, ensuring your suit is ready for action at all times.
- **Multi-Certified Suit:** The Seawork suit offers versatility with or without a lining. Without a lining, it is certified as a 1-hour immersion suit and must be used in conjunction with an approved

lifejacket. With the lining, it transforms into an AES (Anti-Exposure Suit) and becomes an insulated 6-hour immersion suit. When used as an AES-suit, a lifejacket is not required.

- **Designed for Comfort and Functionality:** Seawork features articulated knees and elbows, easy-access storage pockets, a lifting strap, hard toe boots, soft neoprene seals, and an integrated hood adapted for helmet use, ensuring your freedom of movement and convenience.

Certifications and Approvals:

- **SOLAS Approvals:** Seawork is SOLAS-approved in accordance with the LSA-Code, with the following certifications:
 - 1.5a: As an uninsulated 1-hour suit in water temperatures below 5°C without lining.
 - 1.6c: As an AES suit with lining.
 - 1.5: As an insulated 6-hour suit in water temperatures below 2°C with lining.
- **ISO 15027 Approvals:** Seawork is ISO 15027-approved as a Constant Wear Suit with the following thermal classes:
 - Thermal class D: 2 hours in water temperatures below 10°C without lining.
 - Thermal class B: 4 hours in water temperatures below 2°C with lining.

Prepare for the worst conditions at sea with the Seawork Immersion Anti-Exposure Suit - a versatile and reliable choice for those who require the utmost in protection and comfort.
