

Cylindrical Fender

Cylindrical Fenders have been a popular choice for many decades.

TekMarine

TJCY Cylindrical Fenders come in many sizes and configurations, are easy to install and will last for years with minimal maintenance.

The reaction force and energy absorption increase proportionally all the way to the fender's rated deflection, softening vessel berthing.

Depending on size, cylindricals may be installed onto a chain or a steel bar and chains. For very large sizes a custom ladder bracket is recommended.

Almost any length fender can be supplied subject to transport limitations.

Lengths can be pre-curved or jointed on request
