

TEE Bollard

TEKMARINE TEE Bollard is an optimized shape and designed bollard providing the ability to accommodate the mooring lines at much higher angles compared to a Single Bitt or Double Bitt bollard.

In the time of Port's commercial space becoming an expensive affair, its compact design and ability to be used with wide range and type of ships makes it as the most popular design worldwide.

TEKMARINE is able to offer the widest range of TEE Head Bollards from 10t to 200t load capacity bollard as standard product, however for special project we have ability to provide custom design TEE Head Bollards with larger capacity of upto 400t.
