

Straatman Quick Release Offshore Hooks

Specialized Quick Release Offshore Hooks for FPSO and FSRU Operations

For FPSO (Floating Production, Storage, and Offloading) and FSRU (Floating Storage and Regasification Unit) operations, Straatman offers specialized quick release mooring hooks tailored to meet the unique demands of tandem mooring and offloading operations.

FPSO Quick Release Hooks

Our FPSO hooks are engineered for single fixed hook configurations, seamlessly integrated with brackets or foundations for easy mounting on deck surfaces. Whether welded or bolted, these hooks ensure secure mooring with common safe working loads (SWL) ranging from 250 to 300 tons. Custom designs for higher capacities are available upon request.

FSRU Quick Release Hooks

Designed for FSRUs, our quick release mooring hooks are strategically positioned on the deck, facilitating safe side-by-side mooring with other vessels or terminals. These hooks often come with a counter plate/foundation for pre-installation on the deck surface, simplifying the final installment process.

Basic Features of Our Offshore Quick Release Hooks:

- Manual and Remote Release Capabilities
- Mooring Load Monitoring for Enhanced Safety
- Customizable Foundations to Suit Specific Requirements
- Components Certified for Hazardous Environments (ATEX or IECEx)
- Monitoring Panels/Cabinets for Centralized Control Room Integration

Experience the reliability and efficiency of Straatman Quick Release Offshore Hooks, meticulously crafted to meet the rigorous demands of FPSO and FSRU operations.
