

Boatspray Systems

Product Description

The BOATSPRAY range of oil dispersant spray systems are suitable for operation on land, from inshore and offshore vessels; including tugs, supply vessels and workboats.

BOATSPRAY systems are portable and can be operated from almost any “vessel of opportunity”. BOATSPRAY systems are compatible with Spray Arms and AFEDO™ Nozzles for the application of neat or dilute dispersant. Also available with Hand Lances for use on small patches of oil or cleaning, on land or inshore.

Dispersant dilution level is adjusted by manual flow control valves, and accuracy can be enhanced with the optional dilute flow rate indicator.

BOATSPRAY systems can be supplied with a wheel kit that mounts to the chassis for improved manoeuvrability.

Models

The BOATSPRAY range includes three models:

- BOATSPRAY 50 - designed for operation from inshore vessels and produces a maximum output of 60 litres per minute.
- BOATSPRAY 100 - designed for operation from

inshore and offshore vessels and produces a maximum output of 100 litres per minute.

- BOATSPRAY 200 - designed for operation from larger offshore vessels and produces a maximum output of 150 litres per minute.

Features

Single-cylinder, air cooled direct injection Yanmar diesel engine

Robust construction in stainless steel with gunmetal and stainless steel pipework

Fully variable outlet flow

Pressure gauge

Fully customisable to required specification

Compatible with Spray Arms, AFEDO™ Nozzles and Hand Lances

Benefits

Reliable and robust pump units

Corrosion resistant

Portable, “vessel of opportunity” capability

Neat or dilute spraying up to 30% of total outlet flow

Adjustable application rates

BOATSPRAY comes with a 1 Year Warranty
