

ECOSAFE Oil Boom

Strong inflatable booms

The ECOSAFE booms are conventionally inflatable oil containment booms with easily replaceable internal buoyancy chambers. The cylindrical floats with short, independent buoyancy chambers give the boom excellent floating ability and particularly good wave following properties. Should the boom suffer damage, it is easy to replace the affected buoyancy chamber on site.

ECOSAFE booms are designed to be easy to deploy and give reliable operation with low personnel requirements. The booms are designed to remain in the water for long periods of time.

ECOSAFE booms are designed to provide increased visibility in the dark. The booms are bright yellow and have pockets for flashing, high-intensity LED marker lights every 25 meters in addition to generously sized welded-on reflectors on the floats every 5 metres.

ECOSAFE booms are also available in an extra-heavy-duty version.

Product Name	ECOSAFE 1100 ECOSAFE 1400 ECOSAFE1800		
Inflation system	Air/Manual		
Section length [m]	25	25	25
Freeboard height [mm]	400	600	800

Product Name	ECOSAFE 1100	ECOSAFE 1400	ECOSAFE1800
Draft (skirt) [mm]	700	800	1000
Buoy light pockets	Yes		
Reflex	Yes		
Deployment time – per 100 m [min]	5	5	6
