

Heavy Duty Debris Barriers

Floating boom barriers are designed to exclude or contain floatable objects such as floating debris, floating trash, sargassum/seaweed or invasive species plants. These barriers have a proven robust design intended for an extended service life with limited field maintenance. Management of waterways, stormwater applications and coastal protection are all common applications for these barriers.

Uses For Debris & Trash Booms

These floating trash booms are designed to limit the spread of trash, plastic, debris and seaweed/sargassum. They are capable of containing, deflecting, or securing a perimeter from:

- Floating Debris
- Logs
- Timbers
- Trash
- Aquatic Plants
- Sargassum
