

Lifting Airbag

Lifting airbags use high quality rubber and the advanced manufacture process to assure that the largest working pressure up to 1.2Mpa.

This kind of ultra high pressure airbags can be used for lifting caissons or large sized and heavy structures. Lifting airbags have many advantages compared with the conventional lifting jacks.

- More economical compared to hydraulic system.
- High pressure resistance, lifting airbags common working pressure can be 0.2Mpa-0.5Mpa.
- Good air tightness , pressure decrease lower than 10% within 24 hours.
- Long life guaranteed , airbags can be repeatedly used for more than 100 times under the condition of normal use.
- A complete set of solutions is available.
