

Switlik ILV20 - Infant Aviation Life Vest

Infant Life Vest for General Aviation and Commercial Airlines

- The ILV-20 is a dual chamber, 23-pound buoyancy Infant Life Vest, (FAA/TSO-C13d defines "infant" as a wearer with a weight less than 35 pounds).* The underarm configuration allows this vest to be used by wearers whose shorter necks prevent use of the standard "yoke-type" vest.
 - Supplier of more infant life preservers to more air carriers worldwide than anyone else...and has been for over 25 years.
 - Simple, secure, intuitive donning instructions are easy to read and interpret which helps to shorten donning times. In an emergency situation, the vest's 4-way reversibility is a life saver.
 - Compared to the traditional infant cot, the ILV-20 is more compact, lighter weight, easier to don and fits a larger child size range.
-
- Underarm twin cell configuration
 - 2 oral inflation tubes
 - Mildew resistant webbing
 - Water activated TSO C-85 locator light
 - Corrosion resistant hardware
 - Fire-resistant fabric
 - Silk-screened donning instructions
