

500-30 Series Military PLB

The 500-30 is the smallest and most robust Techtest PLB, providing aircrew with a 406 beacon fully compatible with the COSPAS-SARSAT system. The unique design of the 500-30 allows it to be fully configurable to the user's requirements. As standard, the beacon will transmit the 406 MHz message with embedded GPS and the 121.5MHz / 243MHz homing frequencies to provide rescue teams with greater location accuracy. The beacon features lanyard activation, an integrated antenna, additional RF port and a user replaceable battery.
