

Anti-Slip Ladder Rung Covers

Our Hi-Traction® ladder rung covers deliver firm-footed traction from top to bottom, significantly enhancing safety in one of the most dangerous spaces: the slick, small foot surface area on ladder rungs.

Safeguard's two styles of anti-slip ladder rung covers fit easily over the rung, delivering complete, long-lasting performance in the world's toughest indoor and outdoor environments. Our ladder rung covers:

- Come in channel-shaped and half-round styles
- Are made of FRP (fiberglass) and galvanized or stainless steel base
- Have adhesive, mechanical, or welded installation options
- Can be retrofitted in the field or specified as an OEM enhancement

Materials That Will Weather the Storm

Safeguard anti-slip products allow you to choose base layers of corrosion-resistant FRP, stainless steel, galvanized steel, or flexible PVC vinyl. These solid foundations are coated with our tough anti-slip surface to give you long-lasting protection where you need it most.

Where You'll Find Safeguard Anti-Slip Products

- Passenger ferries
