

Antisink Helicopter Kit

Experience the future of maritime safety with the Antisink Heli Kit, a groundbreaking solution for emergency services operating at sea.

The Antisink Heli Kit is a portable system specially developed to rescue sinking vessels. The kit comprises of one compact suitcase containing two buoyancy bags each with a

The kit is lightweight and portable allowing the rescuer to deploy down from the helicopter and either secure the bags under the vessels floor if possible, or attach the D-rings to the vessel for quick deployment. The bags would inflate and stop the vessel from sinking to the bottom.

Technical Specifications:

- 2 Bags with CO2 with quick manual pull out cord to trigger the buoyancy bags
- External Dimensions (HxWxD): 45cm x 50cm x 28cm
- Each Bag has 550kg of lifting capacity
- Drain valve and pressure relief valve in all bags
- Meets the requirements of the ISO Standard IP67

The Antisink Heli Kit is not only a lifesaver but also a budget-friendly, eco-conscious choice. All components, including bags, hoses, and suitcases, are reusable, making it a sustainable and cost-effective solution for every emergency service.
